Summary

9+ years of professional experience, with 4+ years of specialized expertise delivering Big Data and ETL solutions across Banking, Ecommerce, and Technology domains with clients such as Standard Chartered Bank, Amazon Retailers. Strong hands-on expertise in Hadoop ecosystem, including HDFS, Hive, and Spark (Spark SQL, PySpark) for large-scale data processing and analytics. Extensive ETL and data pipeline development experience, designing, developing, validating, and deploying Spark- and Hive-based ETL workflows, including data ingestion from RDBMS to Hadoop platforms. Cloud-based data engineering experience in AWS, worked with S3, and Airflow for orchestration and automation of data workflows. Enterprise delivery and operations exposure including pipeline monitoring, production support, quick bug fixes, documentation etc.

Work Experience

Packaged App Development Sr Analyst (PySpark Developer)

May 2023 - Present

Accenture Solutions PVT LTD

Experienced in designing and developing Spark/HQL-based ETL pipelines for large-scale data processing and business intelligence solutions. Skilled in requirement analysis, backlog refinement, data transformation, and ingestion framework development. Proven ability to document technical solutions, mentor team members, troubleshoot production issues, perform root cause analysis, and ensure high availability of critical data platforms through effective production support and defect resolution.

Data Engineering Jr Analyst (Big Data Developer)

May 2022 - April 2023

Amazon Development Center India PVT LTD

Developed and maintained scalable ETL pipelines using HQL and SQL on Big Data platforms for large-scale customer telemetry processing. Utilized AWS S3 and EC2 for data storage and distributed data processing. Ensured data quality and pipeline reliability through robust ETL frameworks and production support. Monitored workflows using Informatica Monitor, resolved critical production issues, and collaborated with global teams to deliver scalable analytics and business intelligence solutions.

Sr Ecommerce Support Executive (Backend Customer Support)

July 2018 - April 2022

Amazon Development Center India PVT LTD

Delivered exceptional customer support through phone, email, chat, and social media channels, ensuring prompt issue resolution and high customer satisfaction. Provided product and technical assistance, managed complaint resolution, and fostered strong customer relationships. Analyzed customer feedback, identified improvement opportunities, and collaborated with cross-functional teams to enhance service quality and customer experience.

Software Engineer (Android)

September 2016 - February 2018

Emorphis Technologies PVT LTD

Developed and maintained Android applications, collaborating with cross-functional teams to deliver scalable mobile solutions. Integrated RESTful APIs and external data sources, optimized application performance, and resolved production issues. Implemented modern development practices, maintained code quality through reviews and automation, and leveraged emerging technologies to enhance development efficiency and user experience.

Technical Skills

- Pyspark, Spark, Hadoop, HDFS
- Sql, Hiveql, Spark-SQL
- Python
- AWS S3, EC2
- Airflow
- Unix Shell Scripting, Putty, Winscp

Soft Skills

- Strong communication and negotiation skills.
- Squad Lead with team management experience.
- Project management and process optimization expertise.

Education

Masters' of Computer Application

2013 - 2016

International Institute of Professional Studies, Devi Ahilya University, Indore

Bachelors' of Computer Application

2010 - 2013

International Institute of Professional Studies, Devi Ahilya University, Indore

High School Examination

2007 - 2009

Madhya Pradesh Board of Education

Secondary School Examination

1995 - 2007

Madhya Pradesh Board of Education

Projects

Standard Chartered Data Factory

May 2023 - Present

Accenture Solutions PVT LTD | Client - Standard Chartered Bank

- **Project Overview** :- Worked on the Data Factory Project for Standard Chartered Bank, responsible for processing and transforming large-scale enterprise data for analytics and downstream applications. Data is ingested from multiple source systems in formats such as CSV, JSON, and XML into a NAS-based landing zone and subsequently loaded into the Hadoop ecosystem through the SRI (System of Record Ingestion) layer. Using Spark (PySpark) and HiveQL, business transformation logic is applied to cleanse, enrich, and aggregate data before loading it into Product Zone Hive tables within the DAAS schema. The curated datasets are then consumed by reporting platforms, analytics solutions, and external systems.
- **Roles & Responsibilities** :- Developed and maintained scalable ETL pipelines using Spark, PySpark, and HiveQL for processing large volumes of data within the Hadoop ecosystem. Implemented data ingestion and transformation logic based on business requirements, ensuring data quality and reliability. Optimized Spark jobs to improve performance and processing efficiency, collaborated with cross-functional teams to deliver data solutions, and provided production support through monitoring, troubleshooting, root cause analysis, and issue resolution.

Amazon Development Center India PVT LTD | Client - Amazon Retail

- **Project Overview** :- Worked on a Retail Data Factory project involving the ingestion, processing, and transformation of large-scale customer and transactional data within AWS and Hadoop environments. Data from multiple sources, including CSV, JSON, transaction logs, and telemetry feeds, was stored in Amazon S3 and processed using Apache Spark, PySpark, and HQL running on Amazon EC2. Transformation workflows included data cleansing, validation, enrichment, aggregations, and performance optimization before loading curated datasets into Hive tables for reporting and analytics. The processed data enabled business intelligence, retail performance tracking, and customer insight generation across downstream applications.
- **Roles & Responsibilities** :- Developed and maintained scalable ETL pipelines using Spark, PySpark, and HQL to process large volumes of retail data. Implemented data ingestion, transformation logic, and data quality validations while optimizing Spark jobs for improved performance and efficiency. Managed production support activities, including workflow monitoring, troubleshooting, and issue resolution to ensure pipeline stability. Collaborated with business and analytics stakeholders to deliver reliable and scalable data solutions that supported reporting and decision-making processes.

Rewards & Recognitions

Individual Excellence Award	2017
Emorphis Technologies PVT LTD	
Employee of the year award	2020
Amazon Development Center India PVT LTD	
FY25 APAC ALL STAR Q1 Award	2025
Accenture Solutions PVT LTD
